excerpt from lecture notes for chemical students embracing mineral and organic chemistry i have often noticed with regret the great amount of labour which an earnest student expends in noting down the reactions and the names and formulae of substances which are presented to his notice in the lecture theatre he is thus greatly interrupted in following the arguments and explanations of the speaker and he often loses more important generalizations in securing a record of details one of my chief objects in the preparation of this book has been to relieve him from such distractions for this purpose very full lists of names and formulae are given and a comparatively large amount of space is devoted to equations expressing the reactions occurring in the formation and decomposition of the substances treated of such being the chief objects of the book it would obviously have been impossible to give in all or even in many cases the reasons which have induced me to adopt such views of the constitution of both mineral and organic compounds as are either novel or not generally recognized thus i am aware that the atomicity which is assigned to many of the elements may be called in question but it is hoped that in thus giving for the first time a thorough and consistent scheme of the combining powers of atoms about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
